

PREMIUM SOLAR MONITORING SOFTWARE

MONITOR YOUR SOLAR SYSTEMS WITH TIGO SOFTWARE

Tigo's module-level monitoring streamlines your business and improves ROI for utility, commercial, and residential PV arrays. By tracking individual module performance, Tigo software provides an accurate insight of your PV system. You can easily identify issues and predict maintenance requirements from anywhere around the world.

REAL-TIME DATA

Tigo's monitoring platform provides you with voltage, current, and power data. Access it easily from anywhere via the internet or your mobile device.

ACTIONABLE ALERTS

Real-time alerts through email and SMS are triggered when strings or modules under perform or fail. Your system will alert you of diode failures, soiling, or wiring faults. Real-time alerts contribute to proactive maintenance and a lower cost of ownership.

REPORTS & INTEGRATION

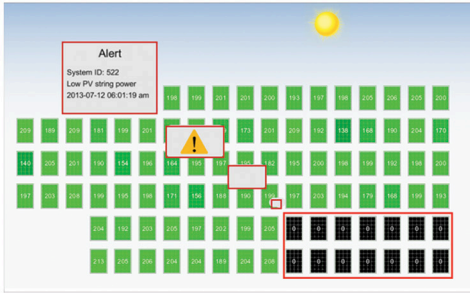

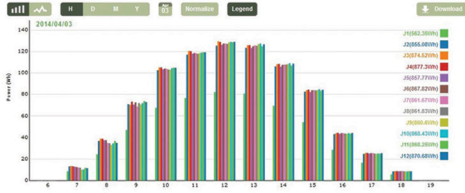

Your monitoring data can be downloaded and stored daily, weekly, monthly, or annually. Inverter data, AC meters, or any MODBUS protocol device software can also be integrated into the Tigo portal for complete monitoring of your entire system.

DOWNLOAD THE TIGO SMART APP

You can upgrade to Premium monitoring once your system is installed through the online portal.
